WORKSHOPS

ACCESS CODE	TITLE	DESCRIPTION	PRESENTER(S)
A01	<i>Community of Aboriginal Nurses</i>	We will introduce you to the application process and opportunities for Indigenous students interested in becoming registered nurses. We know that your journey to become a registered nurse starts before your first day of classes and continues after you write your last exam. To help Metis, First Nations and Inuit nursing students become successful nurses, we will help you learn about careers in the field of health, find support and advising while you complete your program, participate in a mentorship program when you are ready to transition to the workforce and access continuing education as you further your career.	Holly Graham Traci La Rose Kathleen McMullin (University of Saskatchewan, College of Nursing)
A02	<i>National Microbiology Laboratory: Home of Canada's only Level 4 containment laboratories</i>	Have you ever wondered what scientists and researchers do behind the scenes to better understand pathogens like Ebola, SARS-CoV-2, or sexually transmitted infections like syphilis? Would you like to learn more about cutting-edge research and the latest scientific innovations that happen at Canada's national lab? Then sign up TODAY for this presentation featuring researchers from the National Microbiology Laboratory, home to Canada's only Level 4 (highest level) containment labs. Meet a pediatric infectious diseases physician who was also on the front line during the COVID pandemic. Learn more about the latest developments in Phage therapies, a fascinating approach to combatting bacterial infections. If you're the kind of person who is fascinated with scientific breakthroughs and developments, you won't want to miss this workshop!	Dr. Jared Bullard Dr. Michael Parcey Joy Stadnichuk (National Microbiology Laboratory, Winnipeg)
A03	<i>I ❤️ Anatomy!</i>	Presenters will explain why they love anatomy and the joys of teaching it! The workshop will be transformed into a virtual live lab where we will venture into the amazing anatomy of the human heart. We will teach you the chambers and valves, where the heart can be found in your chest wall and perhaps we will have time to show you some pathologies. This lab is not for the faint of heart, pun intended! Have an open mind and great respect for our donors whose last wish was to study from their body donation.	Leilanie Clayton Dr. Alexa Hryniuk (University of Manitoba, Human Anatomy & Cell Science)

A04	<i>Taking Med School Out of the City: How to experience rural and northern medicine as a student</i>	<p>This workshop includes a brief overview of the pathway to medical school as a person from a rural background, highlighting the advantages of coming from a remote place. The workshop then focuses on the range of opportunities to experience rural and northern medicine while in medical school through shadowing and clerkship, with examples of a day in the life of a medical student. Finally, this workshop highlights the range of opportunities to practice medicine in rural and northern places after graduation.</p>	<p>Emma Windfeld (University of Calgary, Cumming School of Medicine)</p>
